SUMMARY

So basically the article talks about things to do with modernism and postmodernism and how they are different but also how they are similar. It's got a lot to do with how pretty things look, but that's not the only part of it, there are other parts too, like what the authors subjectively think is pretty, and maybe even how they were feeling on the day they wrote it because everyone knows when you have a bad day you're going to say things aren't as good as when you have a good day, so like, if they were talking about postmodernism one day before they had coffee, and modernism the next day after they had drank some coffee, they would probably bring their inherent coffee-delicious-happy-bias into the article in some way. But really, this isn't what the article is about, it's just a collection of words about art that is way above my comprehension of the subject matter. I'm not even sure why they asked me to write the summary. Maybe this is a form of art? Who knows.

Academic work should be available and affordable for all. Great institutions are important, and we do not seek to replace them, but there are limitations to what they can and will do. The Academy looks to remedy those limitations by connecting academics to communities directly in a way that benefits both, as well as enhances the knowledge bank we can all share and benefit from.

CONTRIBUTE TO THE ACADEMY

The Academy is built on the principle of shared knowledge. It doesn't matter if you're a tenured professor or an expert in your field with 30 years experience, or if you're a student simply learning a new subject and want to share your views or analysis on what you've learned so far, The Academy is the place for you to share this knowledge.
